ABOUT ME

Self-taught and fast-learning individual with strong skills in programming, graphic design, and digital marketing. I enjoy blending creativity with technical problem-solving, and I've independently built projects such as a neural network from scratch, a rocket landing prediction model, and a fully responsive portfolio website. My passion for interdisciplinary learning drives me to adapt quickly and tackle challenges across various domains. I'm currently seeking opportunities in technical roles where I can grow further and contribute meaningfully, with a long-term goal of working and settling abroad.
